

EP3120

Creditable Isolated CIS System

The **EP3120** is an integrated information and communications system which allows to manage and guard classified information up to **CONFIDENCIAL** level or equivalent NATO/EU/ESA.

This system is integrated and configured by EPICOM so that it can overcome an accreditation process complying with the **CCN-STIC 301** regulations since all the guidelines required to an isolated CIS system (Communication and Information System), which requires the approval to manage and guard classified information up to **CONFIDENCIAL** level or equivalent NATO/EU/ESA, have been applied.

Reliable Security

- The EP3120 system is prepared so that it can be operated in a ZONING 1 classified area.

EP3120 system composition

- A laptop configured as system **customs** element and which allows to scan with an antivirus all the files and software packets that have to be transferred to the isolated computer. It does not contain classified information in clear.
- An **isolated** laptop configured to manage and store the classified information.
- An EP852 Token device which operates as an encryption device and allows to transport encrypted information through non classified systems.
- A set of USB Memories for the transfer of information coming from other systems.
- Hard disk encryption software (installed on each computer: the customs one and the isolated one).
