

EP543X

Encryption Devices Management Center

The EP543X Management Center is an application which allows, from a secure EP1140 computer, the cryptographic maintenance of family national EP430 IP encryption devices network, including the EP430GX and EP430TX encryption devices.

The application must be installed in a secure EP1140 computer over a virtual machine with Windows operative system.

The EP543X must be connected to the red local network of a compatible IP encryption device so that it allows maintaining secure communications with the rest of the encryption devices to be managed.

Reliable Security

- All the information managed by the EP543X is stored encrypted in the EP1140 computer. Thus, all management data in the encryption devices network are ensured.

Configuration

- The EP543X application disposes of a friendly user interface which allows to manage the encryption devices network.
- For the encryption devices operation, continuous connection with the Management Center is not required.
